

## PHANTOM CREEK ESTATES, OLVER

Situated on the Black Sage Bench in the Okanagan Valley, this massive winery and vineyard requires state-of-the-art, precise, clean systems to produce world-class, sustainable wine.

### THE CLIENT

Opening in 2020, Phantom Creek is designed to be a world-class facility, with a restaurant, public and private tasting rooms, cellars and a massive production footprint. Their wine-making process is proudly organic and employs biodynamic farming techniques, which means their building systems need to be just as green.

### THE TASK

Maintain the brand new system using completely green technology that adheres to the organic nature of the business and works optimally in hard water applications. One system supplies cool water for air conditioning, the other hot water for heating. Both systems are part of the Leasam inspection program.

### THE LEASAM SOLUTION

SystemClear can and does perform in the same manner in hard water applications as it does for soft, however more product may be required. A Reverse Osmosis (RO) system was installed, thereby suggesting a lesser amount of product can be used, in turn lowering the cost of the overall project.

  
**TEMPERATURE**  
 HOT & COLD

  
**PRODUCT(S)**  
 SYSTEMCLEAR BASIC

  
**SYSTEM SIZE**  
 7,500 GALLONS  
 (28,391 LITRES)
